Save Time

- Slim design allows operation in low head room areas
- Scoop N Go design allows minimum load time
- Wireless remote eliminates extra wiring harness

- Reversible beaters reduces plug ups
- Variable speed beaters give operator flexibility of bedding materials and time management

Save Bedding

- 2 stage hood deflector allow better control of bedding stream
- From tight arch to long arch gives flexibility for uniform spread
- Relative cut length of 5" or less for better absorbing capacity

- Skid steer must be equipped with case drain
 - Need 12v DC power supply
- Minimum aux. output of 18-20 GPM
- Min. recommended skid steer size 50-60hp

Save Labor

- Easy loading
- Power tail gate to maintain bale after strings are cut
- Skid steer roll back to create gravity feed, for less moving parts
 - 50 feet blowing distance

- 300 degree hood rotate allows you to spread on either side of the skid steer
